Travelodge, Manchester Central, Manchester

Application Field

- Waterproofing buildings
- Waterproofing buildings –special areas

Structure Type

- Hotels

Brief Description

The Travelodge Manchester Central Hotel is a contemporary budget hotel located near the Museum of Science & Industry. The roof of the hotel required general roof repairs and had failing waterproofing to the parapet walls.

Main Problem and Requirements

The building had been suffering from water ingress from the roof for a number of years which had gradually worsened over time. This had led to water damage to the interior and had highlighted problems with the parapet concrete wall above. The failed areas of waterproofing required replacing with a flexible waterproof system which could be terminated over the parapet wall and into the existing waterproofing.
